## **Abstract**

*The exponential growth of the Internet and the Web has flooded with huge quantities of data in different formats on a variety of web pages. It is one of the most important to find information not only fastly but also correctly. Xpath is a query language for addressing structural parts of an XML documents and used to extract XML document elements that match the specified pattern. Sometimes it is difficult to find PSC paper information from library. This paper tends to search PSC paper information more quickly in eXist Native XML database by using Xpath. The user who is unfamiliar with Xpath can also search information.*
